

THE WORLD'S MOST FLEXIBLE, MOST SUSTAINABLE INNERDUCT

Future Network Flexibility

MaxCell® has been helping companies reduce their carbon footprint and demonstrate their commitment to sound environmental stewardship for over 12 years.

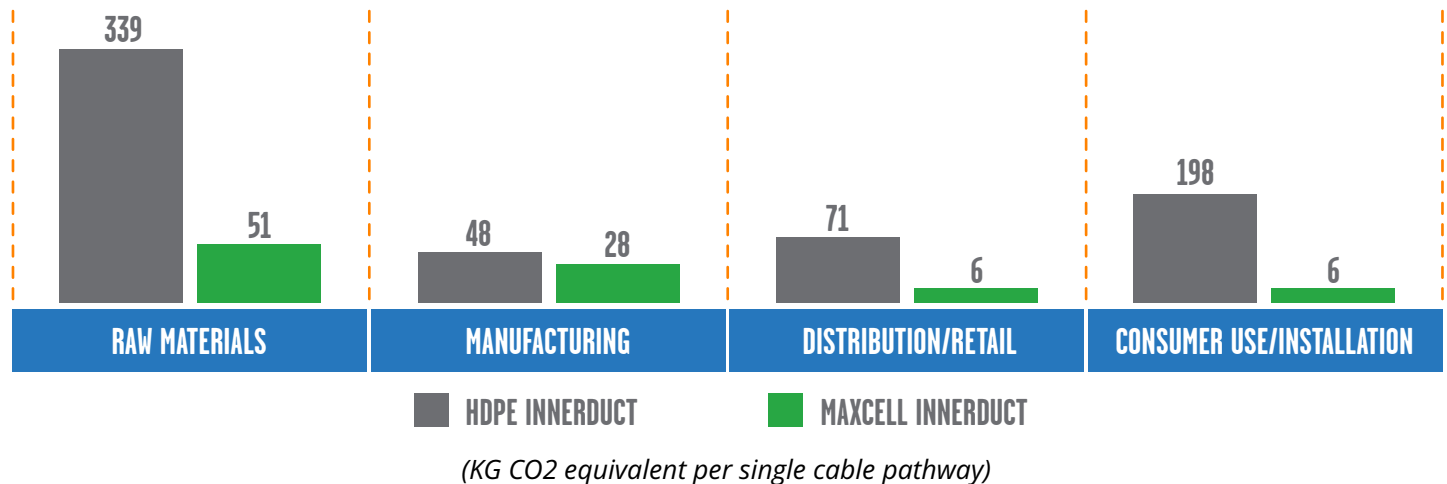

Designed specifically for the network construction industry, MaxCell is a flexible fabric innerduct that provides cable pathway functionality at a fraction of the cost, labor, energy, space and carbon emissions versus HDPE innerduct.

- For every million feet of single-cell MaxCell installed instead of HDPE innerduct, the resulting carbon savings are 644 metric tons CO2 equivalent. *
- Green House Gas (GHG) savings are equal to the annual GHG emissions from over 126 passenger vehicles on the road or over 72,000 gallons of gasoline consumed.
- Over 600 million feet of MaxCell innerduct has been successfully installed around the globe.

* Data collected by Bent Branch Strategies.
